

C contents

1	Conductive Plastic Materials	1
1.1	General Introduction	1
1.1.1	General Information about Conductive Plastics.....	1
1.1.2	Intrinsically Conducting Polymers	2
1.1.3	Structures of Various Conductive Polymers	3
1.1.4	Carbon Nanotubes.....	4
1.1.5	Carbon Nanotubes – Polymer Nanocomposites	4
1.2	Processing of Conductive Plastic Materials	8
1.2.1	Compounding	9
1.2.2	Compounding Equipment	12
1.2.3	Mixing Factors.....	13
1.2.4	Formulations.....	13
1.3	Benefits of using Plastic Conductive Materials	15
1.3.1	Good Electrical Properties for a Broad Range of Applications.....	15
1.3.2	Customisable Materials, Matching the Desired Properties, Price Adjusting.....	15
1.3.3	Weight Reduction.....	16
1.3.4	Ease of Processing	17
1.3.5	Applicable to Any Polymer.....	17
1.4	Applications	18

- 2 Conductive Materials 23
 - 2.1 Conductive Materials to Protect Against Unwanted Electromagnetic and Electric Phenomena 23
 - 2.2 Conductive Polymer Composites 24
 - 2.3 Carbon Nanotubes as Conductive Filler Materials 26
 - 2.3.1 Compatibility of Carbon Nanotubes with Polymers 26
 - 2.3.2 Conductivity and Shielding Properties..... 28
 - 2.3.3 Mechanical Properties 29
 - 2.4 Polyaniline as Conductive Filler Material 31
 - 2.5 Combinations of Carbon Nanotubes and Polyaniline as Conductive Filler Materials 31
 - 2.6 Conclusions 32

- 3 Testing of Conductive Materials 33
 - 3.1 Introduction 33
 - 3.2 Electrical Conductivity 33
 - 3.2.1 In-plane Conductivity..... 35
 - 3.2.2 Through-plane Conductivity 36
 - 3.2.3 The Van der Pauw Method..... 38
 - 3.2.4 Dielectric Properties and Alternating Current Conductivity 39
 - 3.2.5 Conductivity Measurements: Additional Comments..... 41
 - 3.3 Methods to Measure Shielding Efficiency 41
 - 3.3.1 Only a Few Words about the Physics 42
 - 3.3.2 Reflection 42
 - 3.3.3 Absorption 44
 - 3.3.4 Multiple Reflection..... 44

- 3.3.5 Skin Depth 45
- 3.3.6 Near Field and Far Field..... 45
- 3.4 Methods for Testing Shielding Efficiency 46
 - 3.4.1 Shielded Box 47
 - 3.4.2 Coaxial Transmission Line 47
- 4 Processing of Conductive Polymer Composites..... 49
 - 4.1 Introduction 49
 - 4.1.1 Injection Moulding of Conductive Thermoplastic Polymers 49
 - 4.1.2 Materials 49
 - 4.1.3 Methods..... 50
 - 4.2 Drying and Melt Temperature 50
 - 4.3 The Influence of the Mould Temperature 51
 - 4.4 The Influence of the Injection Speed 54
 - 4.5 The Influence of the Part Thickness and the Distance from the Gate 57
 - 4.6 The Influence of the Surface Texture and Flow Direction..... 61
 - 4.7 Observations on Surface Appearance and Microscopic Morphology 63
 - 4.8 Conclusions 67
- 5 Part Design using Conductive Materials 69
 - 5.1 General Design Guidelines for Parts 69
 - 5.1.1 Draft Angle 71
 - 5.1.2 Wall Thickness 73
 - 5.1.3 Bosses..... 74
 - 5.1.4 Holes..... 74

- 5.1.5 Threads 76
 - 5.1.5.1 External Threads 77
 - 5.1.5.2 Internal Threads 78
 - 5.1.5.3 Stripped Threads 78
- 5.1.6 Ribs..... 79
- 5.1.7 Radii and Corners 80
- 5.1.8 Oversized Areas 80
- 5.1.9 Undercuts..... 82
- 5.1.10 Gussets 83
- 5.1.11 Considerations Relating to Shrinkage and Warpage 85
- 5.2 General Guidelines for Mould Design..... 86
 - 5.2.1 Sprue Puller/Cold Material Trap..... 86
 - 5.2.2 Main Runner..... 86
 - 5.2.3 Runner Design 86
- 5.3 Part and Mould Design using Conductive Compounds for EMI and ESD Applications 89
- 6 Applications of Conductive Plastics 91
 - 6.1 Introduction 91
 - 6.2 Current Applications and Market Size 94
 - 6.3 Potential Future Applications and Market Size 95
 - 6.4 Benchmarking Conductive Polymer Materials with Competitors..... 98
 - 6.4.1 Static Control..... 98
 - 6.4.2 Electromagnetic Interference Shielding 100
 - 6.4.2.1 Compounding Solutions 100
 - 6.4.2.2 Another Competitor: Coatings 100

- 6.5 Conductive Polymer Compounds at a Glance 101
 - 6.5.1 Conductive PP: PolyCond 9103 101
 - 6.5.2 Conductive PP: PolyCond 9104 103
 - 6.5.3 Conductive PC/ABS Alloy ESD Protection:
PolyCond 9303 104
 - 6.5.4 Conductive PC/PBT, EMI/RFI/ESD Protection:
PolyCond 9603 104
 - 6.5.5 Conductive PC/PBT, EMI/RFI/ESD Protection:
PolyCond 9604 107
 - 6.5.6 Conductive PC, ESD Protection:
PolyCond 9703 108
 - 6.5.7 Conductive PC, EMI/RFI/ESD Protection:
PolyCond 9704 110
 - 6.5.8 Conductive PC, ESD/EMI Protection:
PolyCond 9705 112
- 6.6 Innovation with Conductive Polymer Materials:
Case Studies..... 113
 - 6.6.1 Automotive Part with Electromagnetic
Interference Shielding Properties 114
 - 6.5.2 Medical Device (Blood-Pressure Monitoring) 114
 - 6.6.3 Military Radio with High-level
Electromagnetic Interference 116
 - 6.6.4 Grounding Earth Pin in a Domestic Plug..... 117
 - 6.6.5 Development in Polyurethane..... 118
- 6.7 In Which Applications do Conductive Polymer
Compounds have an Advantage? 118
- 7 Environmental Aspects 123
 - 7.1 Introduction 123
 - 7.2 Lifecycle Analysis 123
 - 7.2.1 Introduction 123

7.2.2	LCA Methodology	124
7.2.3	Goal and Scope	125
7.2.3.1	Goal	125
7.2.3.2	Functional Unit.....	126
7.2.3.3	System Boundaries.....	128
7.2.3.4	Inventory	131
7.2.3.4	Processing.....	134
7.2.3.5	Assessment	141
7.2.3.5.1	Impact Indicators.....	149
7.2.3.6	Discussion of Results.....	153
7.3	Hazards Associated with the use of Conductive Polymer Composites	158
7.3.1	Risk = Hazard x Exposure	158
7.3.2	Nanomaterials and Risks	158
7.3.3	Conductive Polymer Composites.....	159
7.3.4	Health issues with Multi-wall Carbon Nanotube	159
	Chapter Authors	163
	Abbreviations.....	165
	Index.....	169
